

# Devexperts Time Tracker for Jira Overview

Devexperts Time Tracker for Jira is a time tracking tool developed by Devexperts. It is integrated with Jira, and tracked time goes directly into Jira worklogs. Time can be tracked using JTT both from Jira interface and from Time Tracker interface.

The screenshot displays a Jira ticket titled "Practical task 1" (DI / DI-1114). The ticket is of type "Task" with a "Normal" priority and "Unresolved" status. The description includes a problem statement, input/output examples, a method call, and sample code. The right sidebar shows various tabs including "Dates", "Time Tracking", "Development", "Agile", "Slack", "JTT", and "OneDrive attachments".

Annotations highlight the JTT (Jira Time Tracker) functionality:

- A red box highlights the ticket title "Practical task 1" with the label "Jira ticket" pointing to it.
- A red box highlights the "JTT" tab in the sidebar, with the label "Start / stop tracking from Jira" pointing to it.
- A red box highlights the "JTT" sub-tab, showing the "Start real-time tracking" button.
- A red box highlights the "JTT" sub-tab, showing the "Suspend real-time tracking" button.

The "Time Tracking" section shows the following data:

- Estimated: Not Specified
- Remaining: 2h 30m
- Logged: 0m

The "JTT" section shows the following data:

- Start real-time tracking
- Suspend real-time tracking

# Devexperts Time Tracker for Jira Interface

**Search Bar.** You may find the ticket by the name, keywords or using the JQL request. You may not click it — just start typing.

**Tickets' Group Tabs.** All of Them shows all your tickets, Assigned to Me shows only assigned and Favorites shows only starred.

**Current Ticket.** Ticket, you're tracking right now, and it's timing.

**Start / Stop.** Stops current tracking and resumes it.

**Calendar.** Shows days and weeks (including past). Days after today are not selectable.

**Today Progress.** Shows your total today progress.

**Timeline.** Here you can see your work tracks and manage it

**Tickets List.** Shows tickets you interact with and sorts them by time of interaction.

The interface includes a search bar, group tabs for tickets, a list of tickets, a calendar, a timeline, and a progress bar.

**Tickets List:**

- DXTF-24026 Light Theme Design
- DXTF-22076 [Spectra] ATM Straddle: Cancel A Single Order
- TRACK-257 Create spec for receiving short worklogs
- TRACK-372 Defect by design
- GUI-342 Fintech Basic Presentation
- TRACK-94 Worklogs Managing Spec
- DXTF-20759 [SpectraFX] Off The Runs Design Review
- DXTF-22134 [Spectra] ATM Straddle: Keyboard Navigation
- OTAWEB-211 Move Chart's toolbar to the left side of the Chart
- TRACK-144 Worklog edit - No typing blinking cursors on minutes and hours inputs
- TRACK-336 Create spec for user a preference tab
- TRACK-332 Introduce a dark theme

# Devexperts Time Tracker for Jira Interface

'All of them' tab under the 'Tickets' section contains the full list of tickets available for you to track presented in descending order based on your recent activity:

- last time created a worklog,
- last time real time tracked,
- last time assigned to me,
- last time marked as a favorite.

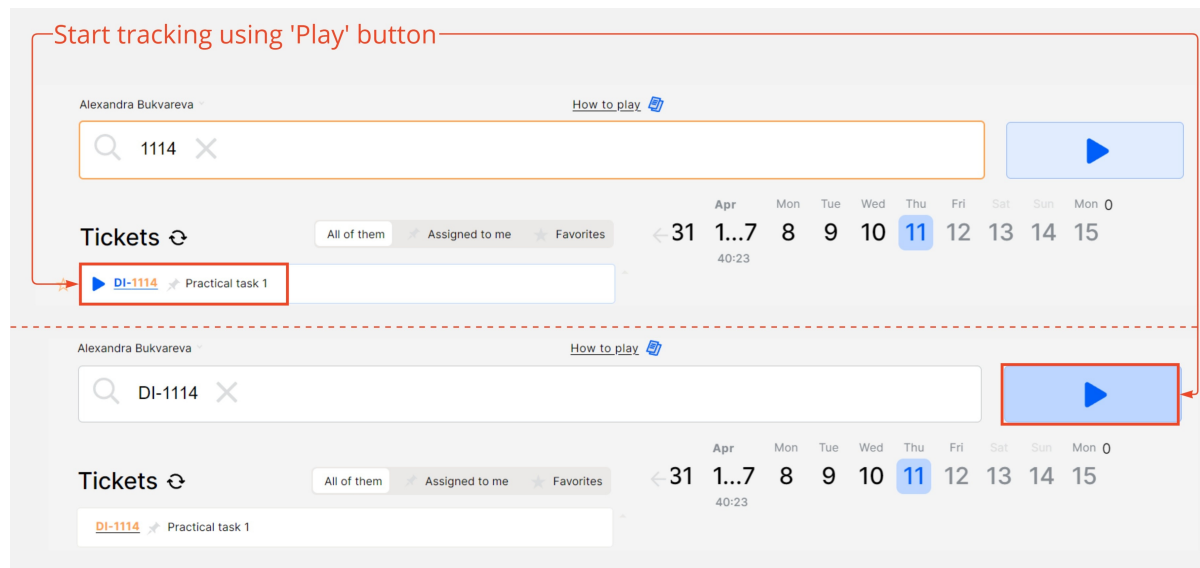

Which means that the most frequently used tickets will be always pop up to the top of the 'All of them' Tab.

Also, next to the tabs of tickets menu there is a **Calendar view**. To see past worklogs one can simply tap on the specific date in the past.

'Search Bar' on the very top will help you find tickets by:

- ticket key (e.g. PROJ-10),
- by part of the ticket summary

You may start/stop tracking using '**Play**' button:

# Devexperts Time Tracker for Jira Interface

You may add tickets you work regularly on to **'Favorites'**. Find a particular ticket, hover on it and a star will appear to its left. Tap on the star and now you should be able find the ticket on the **'Favorites'** tab as well.

Use your credentials to **login**, like it's shown on the picture below:

The image shows a login interface for Devexperts Time Tracker. It features a blue logo consisting of three overlapping squares to the left of the text 'Devexperts Time Tracker'. Below the logo, there are two input fields: 'Username' and 'Password'. The 'Username' field is a white rectangle with a thin grey border. The 'Password' field is a white rectangle with a thin grey border. Below these fields is a blue button with the text 'Sign in' in white.

# Basic Tracking with Devexperts Time Tracker for Jira

You can track your time while you are working on a ticket.

**Start real time tracking** by clicking on the ticket. After you stop tracking, a worklog will be saved immediately and will show up on the timeline on the right panel. In the meantime, a worklog will be synchronized with Jira and appear there shortly.

*Note:*

- If you click on another ticket while you are tracking, then the current session will be stopped and a new one will be started. Tracking logs less than a minute are not possible and will be discarded.
- If you have an active real time tracking period and a planned worklog (worklog set up for later today), then real time tracking session automatically suspends by the system, once it reaches the planned worklog.

The screenshot displays the Devexperts Time Tracker interface for Jira. At the top, the user's name 'Alexandra Bukvareva' is shown next to a 'How to play' icon. A search bar labeled 'Find a ticket' is present. On the right, a red box highlights the '2.Tracking in real time starts' section, which includes the ticket ID 'DI-731' and a timer showing '0:00:59'. Below this, a blue button with a pause icon is visible. On the left, a red arrow points to the '1.Click on the ticket' instruction, which points to the ticket 'DI-731' in the 'Tickets' list. The ticket description is 'Module 26. File API'. Below the ticket list, there are two other tickets: 'ADMIN-63954' with the description 'Contributors are automatically not visible in the Velocity rep...' and 'ADMIN-72088' with the description 'connect list of repos with dx app'. On the right side, a calendar view shows the dates from September 30 to October 14, with the 10th of October highlighted. A timeline at the bottom shows a total time of 41:06 and a current time of 10:00.

# Basic Tracking with Devexperts Time Tracker for Jira

## To edit a duration of a worklog:

- Pull the worklog up or down by the timeline border
- Set the time manually (by double-clicking on a worklog).

*Note:* you can change duration of the ticket only after stopping time tracking of this ticket. The worklogs cannot intersect.

The screenshot displays the Devexperts Time Tracker for Jira interface. On the left, a list of tickets is shown, including **DI-731** (Module 26. File API), **ADMIN-63954**, **ADMIN-72088**, **LD-574**, **LD-573**, and **LD-572**. The right side shows a timeline view for the week of September 30 to October 14. The current date is Thursday, October 10, with a total time of 41:06. A worklog for ticket **DI-731** is shown on the timeline, spanning from 11:30 to 13:05 on Thursday. The worklog bar is highlighted with a red border. Red arrows point to the top border of the worklog bar, with the annotation "1. Pull the worklog up or down to stretch it". Another red arrow points to the time fields (11:30, 13:05, 01:35) on the right side of the worklog bar, with the annotation "2. Edit the time manually". A context menu is open over the worklog bar, showing options for "Comment" and "Delete".

# Basic Tracking with Devexperts Time Tracker for Jira

To delete a **worklog** from the timeline, double-click the worklog and click the appearing '**bin**' icon.

The screenshot shows the Devexperts Time Tracker interface. On the left, there's a 'Tickets' section with a list of tickets. The selected ticket is 'DI-731 Module 26. File API'. On the right, there's a timeline view for Thursday, September 10th. The timeline shows a time range from 1:35 to 1:35. A ticket titled 'DI-731 Module 26. File API' is selected, and a context menu is open with 'Delete' and a trash icon highlighted by a red box.

You can also **change a ticket during real time tracking**: just double-click mistaken ticket and enter a correct name.

The screenshot shows the Devexperts Time Tracker interface. On the left, there's a list of tickets. The selected ticket is 'DI-731 Module 26. File API'. On the right, there's a timeline view for Thursday, September 10th. The timeline shows a time range from 11:30 to 13:05. A ticket titled 'DI-731 Module 26. File API' is selected, and a context menu is open with 'Delete' and a trash icon highlighted by a red box.

*Note:* You can add the ticket to the timeline in the future and continue a real time tracking. But real time tracking of a current ticket will stop once it reaches the start time of that ticket.

# Basic Tracking with Devexperts Time Tracker for Jira

You can also add worklogs using drag-and-drop function by pulling the ticket from the left panel with tickets list to the timeline on the right. The default duration of the worklog is equal 20 minutes, minimal duration is 1 minute.

The screenshot displays the Devexperts Time Tracker for Jira interface. On the left, a 'Tickets' panel shows a list of tickets. Two tickets are highlighted with red boxes and red arrows pointing to the timeline on the right:

- DI-731** ✨ Module 26. File API
- LD-572** ✨ OWASP Training for Developers [Android and IOS Developer]

The timeline on the right shows a calendar view for the month of September. The date **10** is selected, with a time range from **3:55** to **3:55**. The timeline is divided into hourly slots from 10:00 to 15:00. Two worklogs are being added to the timeline:

- DI-731** ✨ Module 26. File API with a duration of **1:35**
- LD-572** ✨ OWASP Training for Developers [Android and IOS Developer] with a duration of **2:20**

A red arrow labeled 'Drag and stretch' points to the worklog for **LD-572**, indicating that the duration can be adjusted by dragging the edges of the worklog.

Set the duration of the worklog:

- Pull the worklog up or down on the timeline (by pulling edges of it, keeping the left button of the mouse),
- Set the time manually (by double-clicking worklog)

All the worklogs will be saved in Jira automatically.

# Advanced Tracking with Devexperts Time Tracker for Jira

## Short Worklogs

By default, the worklog duration is 20 minutes, but it can be edited to be 1 minute long.

Short worklogs can be created either by editing a worklog to less than 20 minutes or by stopping Real time tracking with a duration between 1 and 19 minutes.

# Advanced Tracking with Devexperts Time Tracker for Jira

When a user edits the worklog to a duration of less than 20 minutes, then the worklog will no longer show its label.  
The size of short worklogs bubbles is relative to their duration in minutes.

**To enter the short worklog zoomed view click on any hour on timescale**, and the **UI will zoom in** the short worklog zoomed view.  
In the zoomed view, the hours will be highlighted, with a blue box. **To exit the short worklog zoomed view** the user should **click on the blue box**.

**In zoomed view**, the user can **create short worklogs with drag and drop** (default value of worklog in zoomed view is 1 minute), **start real time tracking**, **delete** or **edit worklogs**, as you would do with normal worklogs.

# Reporting

## Calendar

Time can be tracked up to 10 weeks back

Using "Calendar" function in Tracker you can see time tracked:

- For the day
  - Today or any previous day
- For the week
  - Current week or any previous week

*Note:* Time can be tracked up to 10 weeks back

# Keyboard

You can do most of the routine operations using just a keyboard.

## Navigation

### Navigation

- Press Tab/Shift+Tab to switch between "Search", "Filter", "Tickets", "Calendar", and "Worklogs" areas.
- Use Left/Right to switch between the "All of them", "Assigned to me", and "Favorites" tabs.

### Tickets

- Use Up/Down to select a ticket.
- Press Enter to start/pause tracking time on a ticket.
- Press Space to start dragging a ticket.
- Press Cmd/Ctrl + Enter to find a free slot starting from midnight, create a worklog, and select it.
- Press Cmd/Ctrl + click on ticket / play button - to start tracking from a previous worklog.

### Calendar

- Use Left/Right to select a day or a week.
- Press Enter/Space on a selected day to open its worklog.
- Press Enter/Space on a selected week to expand it and select the first day of the week.

### Worklogs navigation and editing

- Use Up/Down to select a worklog.
- Press Enter to tracking the same ticket.
- Press Cmd/Ctrl + C to open comment area.
- Press Shift + E to start editing a worklog.
- Press Cmd/Ctrl + Shift + arrow up - to expand worklog up to the previous worklog
- Press Cmd/Ctrl + Shift + arrow down - to expand worklog down to the next worklog
- Press Cmd/Ctrl + Shift + E - to expand worklog both up and down
- Press Tab/Shift+Tab to switch between worklog fields.
- Press Space to activate "Comment" or "Delete" actions.
- Press Enter/Esc to save changes and exit editing mode.

### NVDA Screen Reader Support

- NVDA Screen Reader hints are now available!

# Dark Mode

Time Tracker has a dark mode as well.

The dark mode is based on user preferences that are set on the PC, thus applied on the browser.
